

## Assistance systems for autonomous driving

Technical products for a wide range of requirements regarding environmental factors.

- Design surfaces for open use with high demands as to media, temperature and UV resistance.
- Components with electro-conductive heating elements for removing snow and ice as the eventual application – for added value in the user application through improved road safety.
- Development expertise and high proportion of in-house production make custom-made solutions possible.
- In-house assembly processes of injection moulded parts and subassemblies tested in EOL test facilities ensure the high-level quality of radar systems.
- Representation of a global production in terms of “local for local”.
