

Components for vacuum pumps

Plastic components of highest precision made of wear-resistant materials featuring dimensional stability and low specific weight.

- Vacuum pump vanes: injection moulded and subsequently machined for maximum precision
- End caps: highest protection against wear thanks to tribological materials (PEEK, PPS, PA crosslinked)
- Components for check valves: high-quality, burr-free surface in the seal area
- In this product line OECHSLER offers you:
 - our own tool making (best of class)
 - long-term experience
 - diversity of materials
 - global production giving you “local for local” with top know-how
